

ShiftBridge

Nursing Facility Staffing Platform

Product Specification — Draft v1.7

March 2026

1. Overview

ShiftBridge is a web-based staffing coordination platform designed for the per diem nursing shift market. It replaces the fragmented, manual workflows currently used between nursing facilities and staffing agencies — spreadsheets, phone calls, emails, and duplicate data entry across multiple tools — with a single connected platform that gives every party a real-time, accurate view of shift availability and staffing status.

The platform is designed to deliver immediate value to each user type independently, before any cross-party connections are established. Network effects grow organically as facilities and agencies begin using the platform and discover their partners are already on it.

2. Problem Statement

The current per diem shift workflow is broken at every step:

- Facility sends open shifts to agency via email or phone
- Agency manually enters shifts into a spreadsheet or legacy scheduling tool
- Nurses search through spreadsheets to find and claim available shifts
- Agency must constantly monitor the spreadsheet for changes
- Agency emails or calls the facility to request confirmation of each claimed shift
- Facility confirms — agency updates the spreadsheet
- Agency re-enters confirmed shift data into a separate payroll or scheduling tool (e.g. Deputy)
- Nurse is finally notified they are confirmed for the shift

Every step is manual, error-prone, and dependent on someone actively monitoring a system. Shifts fall through the cracks. Facilities go understaffed. Agencies waste hours on coordination that should be automated.

3. Solution

ShiftBridge collapses the entire workflow into four steps: facility posts shift, nurse claims shift, facility confirms, everyone is notified. No spreadsheets, no phone tag, no duplicate data entry.

4. User Types & Dashboards

The platform has four user types, each with a dedicated dashboard:

4.1 Super Admin (Platform Owner)

Manages the overall platform. Responsibilities include:

- Manage agency and facility accounts
- Oversee platform-wide activity and health
- Handle billing and subscriptions
- Manage agency-facility contract relationships
- View demo system analytics and conversion tracking (see Section 18)

4.2 Agency Admin

The hub of the platform. Manages their agency's staff roster and coordinates shifts across all contracted facilities. Key capabilities:

- Create and manage staff accounts — nurses cannot self-register; access is granted by the agency admin only
- Add staff via NURSYS license lookup — credential data pulled automatically
- Manually complete remaining staff profile fields: phone number, home address, health credentials, pay rate, and optional profile photo
- View a unified shift calendar combining all contracted facilities
- Manually input shifts for facilities not yet on the platform (placeholder facility mode)
- Monitor claimed and confirmed shifts in real time
- Configure pay tiers (Tier 1, Tier 2, Tier 3) with custom names and bonus dollar amounts
- View DNR flags across their roster — which staff have been DNR'd at which facilities
- Cancel confirmed shifts on behalf of staff — shift reopens automatically
- Export confirmed shifts to CSV for payroll processing

4.3 Facility Admin

Manages the facility's shift calendar and staffing needs. Key capabilities:

- Post open shifts with required credential level, date, start/stop time, and priority tier
- Mark shifts as Tier 1 (Regular), Tier 2 (Urgent), or Tier 3 (Emergency)

- Manage an internal staff roster (float pool / per diem employees)
- Allow internal staff to pick up available shifts directly
- Receive shift claims in chronological order, review the claiming nurse's credential card, and confirm preferred nurse
- Mark agency staff as Do Not Return (DNR) after a completed shift
- Cancel confirmed shifts up to 12 hours before shift start

4.4 Nurse / Staff

End users who pick up and work shifts. Access is granted by their employer. Key capabilities:

- Browse available shifts filtered to their credential level — DNR'd facilities are automatically hidden
- See shift details including facility, date, time, credential required, pay rate, and estimated drive time from home
- Claim open shifts directly through the app
- Receive real-time SMS and in-app notifications for confirmations and cancellations
- View their upcoming confirmed schedule
- Cannot cancel confirmed shifts — must contact agency admin

5. License Lookup & Staff Profiles

5.1 NURSYS Integration

ShiftBridge integrates with NURSYS, the national nurse license verification system operated by NCSBN, covering all Nurse Licensure Compact (NLC) states including Kansas. When an agency admin adds a new staff member, they input the license number and state. The system queries NURSYS and returns:

- Full legal name
- License type and endorsements (e.g. LPN, LPN IV, RN, CNA, CMA)
- License status (active, expired, suspended, revoked)
- License expiration date
- Compact privilege information — which states the nurse is authorized to practice in

5.2 Credential Logic from License Data

- RN — IV certified by default; universally IV certified within scope of practice
- LPN IV — Kansas and other applicable states issue this designation; system tags nurse as IV certified
- LPN — no IV certification

- CMA — sees CNA and CMA shifts
- CNA — standard credential

If a state does not include IV certification in license data, the agency admin can set it manually as a fallback.

5.3 License Monitoring

The platform runs periodic license status checks against NURSYS for all active staff. Agency admins are notified 30 days before expiration and immediately if a license is suspended or revoked.

5.4 Health Credentials

Health credentials are entered manually by the agency admin:

- CPR Certification — expiration date tracked; 30-day expiration notification sent to agency admin
- TB Test — date completed tracked; system flags if test is older than 12 months
- COVID Vaccinated — simple checkbox, no expiration tracking

Flu shot tracking is excluded from V1.

5.5 Full Staff Profile Fields

- Full name (from NURSYS)
- License number and state
- Credential type (from NURSYS)
- IV certification status (from NURSYS or manually set)
- License status and expiration date (from NURSYS)
- CPR certification expiration date
- TB test completion date
- COVID vaccination status
- Phone number (manually entered)
- Home address (manually entered — used for drive time only, never exposed externally)
- Base pay rate (manually entered — never visible to facilities)
- Profile photo (optional)

6. Credential Card

When a facility admin reviews a shift claim, they can view the claiming nurse's credential card before making a confirmation decision. This gives facilities the transparency to confirm staff with confidence.

6.1 What the Credential Card Shows

- Profile photo (if uploaded)
- Full name
- Credential type
- License number and status
- License expiration date
- CPR certification expiration date
- TB test date
- COVID vaccination status

6.2 Access & Privacy

The credential card is visible to facility admins only during the claim review process. Home addresses and pay rates are never included.

7. Do Not Return (DNR) System

Facilities can mark agency staff as Do Not Return after a completed shift. The DNR is facility-specific — it affects only that nurse's access to shifts at that facility. The nurse is never notified they have been DNR'd.

7.1 How It Works

- After a shift is marked complete, a DNR option becomes available on that shift record for the facility admin
- Facility admin marks the nurse as DNR
- That facility is automatically hidden from the nurse's available shifts calendar going forward
- The nurse continues to see and claim shifts at all other facilities normally
- The agency admin is notified that a staff member has been DNR'd at a facility

7.2 Agency Admin Visibility

Agency admins can view a DNR log across their roster — which staff members have been DNR'd at which facilities — to help manage relationships and staffing decisions.

7b. Multi-Agency Staff Profiles

A nurse may work for more than one agency that uses ShiftBridge. Rather than creating duplicate profiles, the platform uses the nurse's license number as a unique identifier. If a second agency attempts to add a nurse whose license number already exists in the system, the platform links the new agency affiliation to the nurse's existing profile instead of creating a duplicate account.

The nurse retains one login and one account. Each agency they are affiliated with appears as a separate affiliation on their profile. Agency-specific details — pay rates,

internal notes, credential approval status — are visible only to the agency that entered them. No agency can see another agency's configuration for the same nurse.

This design ensures nurses have a single unified schedule view while keeping each agency's internal data fully isolated from competing agencies.

8. Shift Data & Credential Logic

8.1 Shift Fields

- Facility name and location
- Date
- Start time and end time
- Required credential level (CNA, CMA, LPN, LPN IV, RN)
- Priority tier (Tier 1 / Tier 2 / Tier 3)
- Status (Open, Claimed, Confirmed, Canceled, Filled)

8.2 Credential Visibility Rules

Nurses only see shifts they are qualified for. DNR'd facilities are excluded regardless of credential match:

- CNA — sees CNA shifts only
- CMA — sees CNA and CMA shifts
- LPN — sees LPN shifts only
- LPN IV — sees LPN and LPN IV shifts
- RN — sees RN, LPN, and LPN IV shifts

9. Placeholder Facility Shift Entry

Entering shifts for placeholder facilities needs to be as fast and friction-free as possible — this is the moment the agency admin is replacing their spreadsheet. Two methods are supported:

9.1 Manual Shift Entry

A simple, minimal form accessible directly from the placeholder facility's calendar. Clicking any empty day opens the form inline — no separate page. The date is pre-filled from the day clicked. Required fields only:

- Date (pre-filled)
- Start time
- End time
- Credential required (CNA, CMA, LPN, LPN IV, RN)
- Priority tier (Tier 1 / Tier 2 / Tier 3)

A 'Save and add another' option allows the admin to knock out a batch of shifts quickly without reopening the form each time. The goal is the fewest possible clicks per shift.

9.2 AI-Powered Shift Parser (Potential Future Feature)

Facilities typically send shift needs in monthly batches via email in inconsistent or unstructured formats. A potential future feature would allow agency admins to paste raw email text directly into the platform and have it automatically parsed into structured shift records ready for import.

Proposed flow:

- Agency admin copies the shift list from a facility email — any format, messy or clean
- Pastes it into a text input field in the app
- The platform sends the text to the Claude API which extracts dates, times, credential types, and shift counts — mapping them to the required shift fields
- A review table displays the parsed results with editable fields for any corrections before confirming
- Admin confirms and all shifts are imported to the calendar at once

Example: unstructured text like 'Need coverage Jan 6 nights, Jan 8 and 9 days, 15th need two CNAs morning shift, RN every weekend in January 7-3' would be converted into individual structured shift records. A CSV download of parsed shifts would also be available for agencies that want to keep their own records.

This feature is flagged as a potential addition to be evaluated based on user feedback after V1 launch.

10. Drive Time Display

When browsing available shifts, nurses see the estimated drive time from their home address to each facility displayed on the shift card — e.g. '23 min away'. Calculated via a mapping API (e.g. Google Maps Distance Matrix). If no home address is on file the field is not shown. The home address is never exposed to facilities, agencies, or other staff.

11. Pay Structure & Priority Tiers

11.1 Base Pay

Each staff member has an individual base pay rate set by the agency admin. Not visible to facilities.

11.2 Priority Tiers & Bonus Pay

Tiers are stored as neutral values (Tier 1, Tier 2, Tier 3). Facilities set the tier when posting. Each agency maps its own bonus pay configuration to those tiers in settings.

Facility side:

- Tier 1 — Regular
- Tier 2 — Urgent
- Tier 3 — Emergency

Agency side example:

- Tier 1 → Regular Pay (no bonus)
- Tier 2 → E-Pay (+\$8/hr)
- Tier 3 → Double E-Pay (+\$16/hr)

Nurses see the tier label and resulting pay rate before claiming. Facilities see priority level only.

12. Core Workflows

12.1 Standard Shift Flow

- 1. Facility admin posts open shift with credential, time, date, and priority tier
- 2. Shift appears on all contracted agencies' calendars (hidden from DNR'd nurses)
- 3. One or more nurses claim the shift — claims queue chronologically
- 4. Facility admin reviews queue, views each nurse's credential card, confirms preferred nurse
- 5. Confirmed nurse receives SMS and in-app notification
- 6. All other claimants notified the shift is filled
- 7. Shift removed from open agency calendar
- 8. Confirmed shift appears in CSV export for payroll
- 9. After completion, facility admin has option to mark nurse as DNR

12.2 Cancellation Flow

- Nurse contacts agency admin outside the platform
- Agency admin cancels the confirmed shift
- Facility notified — shift reopens
- Nurse notified — shift cleared from schedule

Cancellations inside the 12-hour window are flagged as late — the shift still reopens but the facility is notified of the short notice.

12.3 Internal Facility Float Pool Flow

Facilities can manage their own internal per diem or float pool staff independently of any agency, giving the platform standalone value from day one.

12.4 Agency Standalone Mode

Agencies can operate fully before any facilities have joined, using placeholder facility profiles to replace spreadsheet workflows from day one.

13. Placeholder Facilities, Facility Types & Connection Requests

Agencies can create placeholder facility profiles to begin entering and managing shifts before a facility has joined the platform. The connection process between agencies and real facilities is always a mutual two-sided confirmation — no calendars merge automatically.

13.1 Placeholder Creation Flow

When an agency admin creates a placeholder facility they provide:

- Facility name
- Address
- Facility type — selected from a predefined list (Long Term Care, Assisted Living, Hospital, Rehabilitation, Memory Care, or similar options to be finalized)
- Scheduling coordinator email (optional — used for shift confirmation emails)

Facility type is required and serves two purposes: it helps distinguish between multiple distinct facilities at the same address (e.g. a long term care wing and an assisted living wing in the same building), and it provides context when a connection request is reviewed by the facility.

On submit, the platform checks for address matches against existing verified facility accounts.

13.2 Address Match Logic

If no address match is found the agency proceeds directly to the calendar and can begin entering shifts manually.

If an address match is found the platform surfaces the matched facility's name, type, and address and presents a prompt: 'A facility at this address is already on ShiftBridge — is this the same facility?' The agency admin reviews the information and chooses to send a connection request or continue as a standalone placeholder with no connection.

Two facilities at the same address with different facility types are treated as distinct entities and do not trigger a match with each other. The combination of address and facility type must match for a connection suggestion to be presented.

13.3 Connection Request Flow

If the agency confirms the match and requests a connection:

- A formal connection request is sent to the facility — both a confirmation email to the facility contact and an in-app notification

- The facility admin reviews the request, sees the agency name and details, and accepts or declines
- The agency can continue operating in placeholder mode and manually entering shifts while the request is pending — nothing changes on the agency side until the facility confirms
- The facility's calendar does not merge into the agency's view until the facility explicitly accepts

Both sides must actively confirm before any calendar connection is established. No automatic merging occurs.

13.4 On Connection Confirmed

When the facility accepts the connection request:

- The agency admin receives a warning: 'Connecting to this facility will remove X manually entered placeholder shifts. This cannot be undone. Confirm?' — requires explicit confirmation before proceeding
- Upon confirmation, all manually entered placeholder shifts are deleted
- The facility's real shift calendar merges into the agency's unified calendar view
- All future shifts come through the live two-way connection
- The placeholder facility profile is retired and replaced by the verified facility account

13.5 If Connection is Declined or Ignored

If the facility declines the connection request or does not respond, the agency continues operating in placeholder mode exactly as before. No data is changed. The agency can still manually enter shifts and use the coordinator email for confirmations. They can send another connection request in the future if circumstances change.

13.6 Facility Contact Email & Shift Confirmations

When a coordinator email is on file for a placeholder facility and a nurse claims a shift:

- Coordinator receives a professionally formatted email with shift details
- Email contains a secure, single-use confirmation link
- Coordinator confirms with one click — no login required
- Nurse and agency admin notified immediately
- If declined, shift reopens and agency is notified

13.7 Post-Confirmation Conversion

After confirming a shift via the email link, the coordinator sees a ShiftBridge signup prompt on the confirmation page. They experience the platform's value before being asked to join. Click-through and signup rates are tracked in admin analytics.

14. Dashboard Specifications

Each user type has a dedicated dashboard tailored to their day-to-day needs. The following outlines the key views, tabs, and data each dashboard should surface.

14.1 Agency Admin Dashboard

The agency admin dashboard is the operational hub of the platform. It needs to give the admin a clear picture of everything happening across their staff and facilities at a glance.

Shift Tabs

- Confirmed Shifts — all upcoming confirmed shifts across all facilities and staff
- Pending Shifts — shifts that have been claimed but not yet confirmed by the facility
- Canceled Shifts — recent cancellations with date, staff member, facility, and whether it was late

Facility View

Clicking on any facility opens a breakdown showing:

- Month-by-month history of shifts worked, canceled, and pending but declined
- Approximate total hours worked at that facility
- Cancellation rate — useful for identifying facilities that frequently cancel confirmed shifts
- Unconfirmed claims list — shifts where a nurse claimed but the facility never responded, with a manual status field the admin can update (Filled in house / Filled by other agency / Facility unresponsive). This serves as a marketing and relationship management tool — each unresponded claim is a reason to follow up with the facility

Staff View

A tab showing each employee's activity:

- Number of shifts worked this month and year to date
- Number of shifts canceled
- Approximate hours scheduled and worked
- DNR flags — which facilities have DNR'd this staff member

Financial Snapshot

- Approximate total hours confirmed this month across all staff
- Estimated payroll total based on individual pay rates — a quick reference, not a replacement for their payroll system

Credential Alerts Widget

A consolidated view showing all staff with credentials expiring in the next 30 days — license, CPR, or TB test — with quick links to each profile.

Open Shifts Needing Attention

A list of shifts at placeholder facilities that are unfilled, sorted by urgency tier and how long they have been open. Shifts that have been open for an extended period without any claims are flagged.

DNR Summary

A consolidated view of all DNR flags across the agency roster — which staff members have been DNR'd and at which facilities — to help spot patterns and manage relationships.

Recent Activity Feed

A live log of recent platform activity — shifts claimed, confirmed, canceled, staff added, credentials expiring. Gives the admin a pulse on operations without clicking through multiple tabs.

Mass Text Tool

A simple tool to send an SMS broadcast to all staff matching a specific credential group. Used primarily for urgent and emergency shifts that need fast attention:

- Admin selects credential type (RN, LPN, LPN IV, CMA, CNA) or all staff
- Writes a short message — shift date, time, facility, pay tier
- Sends to all matching active staff at once
- Useful for Tier 2 and Tier 3 shifts that need rapid fill

14.2 Facility Admin Dashboard

The facility admin dashboard is focused on coverage visibility — knowing which shifts are filled, which need attention, and who is coming in.

Shift Calendar

Primary view showing the current month with color-coded shift status at a glance. Clicking any day opens a detail view showing all shifts, who is confirmed, credential types, and agency affiliations.

Shift Tabs

- Open Shifts — posted but not yet claimed or confirmed
- Pending Confirmation — shifts that have been claimed and are waiting for the facility to confirm
- Confirmed Shifts — fully confirmed upcoming coverage
- Canceled Shifts — recent cancellations with late cancellation flag where applicable

Shift Configuration Setup

Before using the shift posting calendar, the facility admin completes a one-time setup defining their shift schedule per credential type. This configuration drives the calendar button interface and auto-fills shift times on every posted shift — no manual time entry required. Example configuration:

- RN → Day shift: 7am–7pm / Night shift: 7pm–7am
- CNA → 1st shift: 7am–3pm / 2nd shift: 3pm–11pm / 3rd shift: 11pm–7am
- CMA → 1st shift: 7am–3pm / 2nd shift: 3pm–11pm / 3rd shift: 11pm–7am
- LPN → configured the same way if applicable

Each facility sets up the shift times that match their actual operations. A facility running 12-hour nurse shifts and 8-hour CNA shifts configures those separately. This setup only needs to be done once and can be edited any time.

Calendar Shift Posting Interface

When the facility admin clicks any day on the calendar, a panel opens showing a button for every credential-shift combination configured for that facility. For example:

- Day Nurse
- Night Nurse
- 1st Shift CNA
- 2nd Shift CNA
- 3rd Shift CNA
- 1st Shift CMA
- 2nd Shift CMA
- 3rd Shift CMA

Clicking any button prompts a simple quantity input — how many of this credential are needed for this shift. Entering 2 creates two separate claimable shift records, each with the correct times and credential pre-filled from the facility's configuration. The tier defaults to Tier 1 and can be changed at posting time. The facility can post any combination of shift types for a given day in just a few clicks with no manual time entry.

Tier Editing on Open Shifts

Any open shift can have its tier updated at any time before it is claimed and confirmed. If a shift is approaching and still uncovered, the facility admin clicks the shift on the calendar and changes the tier — Tier 1 to Tier 2, or Tier 2 to Tier 3. The change is immediate and reflected on the agency calendar right away. Nurses browsing shifts see the updated pay tier instantly.

This allows a natural urgency escalation workflow — post early at regular pay, bump to urgent pay a few days out if still open, bump to emergency pay if it is the day before. Combined with the agency admin mass text tool, an escalated tier can trigger an immediate SMS blast to all qualified nurses.

Agency Overview

A view showing all connected agencies with:

- Which agencies are contracted with this facility
- Number of confirmed shifts per agency this month
- Option to input the bill rate charged by each agency — used to calculate approximate staffing cost
- Approximate monthly cost based on confirmed hours and bill rates

Internal Staff View

A tab for managing the facility's own float pool staff — who is scheduled, hours this month, and any open internal shifts.

14.3 Nurse / Staff Dashboard

Clean and simple — nurses are primarily on mobile and need to find and claim shifts quickly. A nurse may be affiliated with more than one agency on the platform. The dashboard is designed to handle this gracefully.

Agency Selector

If a nurse is affiliated with more than one agency, a dropdown at the top of the dashboard allows them to select which agency's shifts they are currently browsing. The selected agency's logo is displayed on the page while that agency is active. Switching agencies changes the available shifts view to show only that agency's contracted facility shifts. This keeps the browsing experience focused and avoids a confusing mix of shifts from multiple agencies.

Available Shifts

A list or calendar of open shifts from the currently selected agency's contracted facilities, filtered to the nurse's credential level. Drive time is displayed on each shift card. DNR'd facilities are automatically excluded regardless of which agency is selected.

My Schedule

Confirmed upcoming shifts from all affiliated agencies shown in a single consolidated calendar view. Each shift is visually differentiated by agency — color coded or badged with the agency logo — so the nurse can see at a glance which shifts belong to which agency and knows which name badge to wear for each shift. A summary bar showing:

- Total confirmed shifts this month across all agencies
- Approximate total hours scheduled
- Option to generate and download a PDF of their full monthly schedule

Double Booking Prevention

If a nurse attempts to claim a shift that overlaps in time with a shift they are already confirmed for — regardless of which agency it came from — the platform warns them before the claim is submitted. This prevents accidental double booking across multiple agency affiliations.

Pending Claims

Shifts the nurse has claimed across all agencies that are awaiting facility confirmation — so they know what is in flight and are not left wondering.

14.4 Super Admin Dashboard

Platform-wide visibility and management. Focused on health, growth, and relationships.

Platform Overview

- Total active agencies and facilities
- Total confirmed shifts this month and month over month trend
- New signups over time
- Demo sessions and conversion rate

Agency-Facility Connections

A clear view of which agencies are connected to which facilities — searchable and filterable. Clicking an agency shows all their connected facilities and vice versa. This is a core operational view for managing the platform.

Placeholder Facility Management

Super admin can view, create, and manage placeholder facilities on behalf of agencies. Useful during early onboarding when agencies may need hands-on setup assistance. Address match alerts surface when a real facility registers with a matching address.

Account Management

- Create, edit, suspend, or deactivate agency and facility accounts
- Reset passwords on behalf of any user
- View billing and subscription status per account

Demo & Acquisition Analytics

Full demo funnel data, placeholder facility email stats, and conversion tracking as detailed in Section 23.

15. Notifications

SMS and in-app for all registered users. Email for placeholder facility contacts. Key triggers:

- Nurse claims a shift → facility admin or placeholder contact notified
- Facility confirms a nurse → confirmed nurse notified, all other claimants notified shift is filled
- Placeholder contact confirms via email → nurse and agency admin notified
- Shift canceled → facility and nurse notified, shift reopens
- Late cancellation → facility receives additional late-notice flag
- Facility joins platform with address matching a placeholder → agency receives connection request prompt

- Agency sends connection request → facility receives in-app notification and email
- Facility accepts connection request → agency notified, warned about placeholder shift deletion before merge completes
- Staff license expiring (30 days) or status changed → agency admin notified
- CPR certification expiring (30 days) → agency admin notified
- TB test older than 12 months → agency admin notified
- Staff DNR'd at a facility → agency admin notified

16. Platform Design Principles

- Web-based, fully responsive and optimized for mobile
- Closed roster model — all staff accounts created by agency or facility admins
- Real-time SMS and in-app notifications for all key events
- Email notifications for placeholder facility contacts
- Minimal clicks to complete core actions
- Urgent and emergency shifts receive prominent visual treatment in the calendar UI
- Clean CSV export of confirmed shifts for payroll import
- Outward-facing touchpoints professionally designed as a first impression of the platform

17. Go-to-Market Strategy

17.1 Anchor Tenant Strategy

Target one large facility network and one of their primary agencies as anchor tenants. Once both are active, other agencies wanting access to those shifts have a strong incentive to join. Other facilities follow naturally.

17.2 Passive Facility Acquisition

The placeholder facility email confirmation flow creates a passive acquisition channel requiring no cold outreach. Every confirmation email is an organic introduction to ShiftBridge at the moment of highest relevance.

18. Planned V2 Features

The following features are intentionally excluded from V1 but are fully designed and documented here so they are not lost. They should be prioritized in V2 based on user feedback after launch.

18.1 Encrypted Facility Information Notepad

A secure encrypted notepad system allowing facility admins to store facility-specific information for each nurse they work with. All notes are encrypted at rest using AES-256 encryption with keys managed via a dedicated key management service (e.g. AWS KMS). Nurses are read-only.

Facility Template

Each facility admin creates a single facility-wide template containing general information that applies to all nurses — parking instructions, entrance codes, who to check in with, break room details, and any other general facility info. Written once and updated centrally. When the template is updated it automatically reflects for all nurses who have access.

Per-Nurse Section

Below the template, each nurse has an individual section where the facility admin enters nurse-specific information — primarily EMAR login credentials. Credentials are sent directly through the platform rather than via text or email, keeping sensitive info inside the encrypted system with a clean auditable record. The note persists indefinitely since facilities typically maintain nurse logins over time rather than creating new ones per shift.

Nurse View

The nurse sees template and per-nurse content as a single unified note under that facility. The distinction between template and individual content is not visible to the nurse.

DNR Auto-Wipe

When a facility marks a nurse as DNR, the entire notepad for that nurse-facility pair is automatically and permanently wiped — both template content and per-nurse section. The facility disappears from the nurse's view entirely. This ensures a DNR'd nurse no longer has access to door codes, EMAR credentials, or any other facility information. No manual step required.

Facility Admin Controls

- Create and edit the facility-wide template at any time — updates push to all nurses automatically
- Add or update per-nurse credentials for any nurse who has worked at the facility
- Revoke a specific nurse's per-nurse section without triggering a full DNR
- View a list of which nurses currently have active notepads at the facility

18.2 Custom Credential Builder

A flexible system allowing agency admins to define custom credential requirements beyond the standard V1 fields. Includes pre-configured common credentials (BLS, ACLS, Hepatitis B, background check, drug screen, physical exam) with appropriate date fields auto-configured, a custom Other option, document upload, expiration

tracking, required vs optional toggle, and a document approval workflow. Deferred to V2 to avoid overbuilding before understanding what agencies need.

18.3 Drag-and-Drop Internal Schedule Builder

A dedicated facility admin tab for building and visualizing internal staff schedules with drag-and-drop onto a calendar, configurable shift slot requirements, real-time fill counts, and color-coded coverage status. Deferred to V2 as it is primarily useful for facilities with larger internal float pools.

18.4 AI-Powered Shift Parser

A text input tool allowing agency admins to paste raw shift lists from facility emails and have them automatically parsed into structured shift records via the Claude API, with a review-and-edit table before import and optional CSV download. Deferred to V2 pending V1 user feedback on whether manual entry is sufficient.

18.5 Payroll Platform Integrations

Direct integrations with payroll and scheduling tools such as Deputy and ADP, eliminating the final manual CSV import step. To be scoped based on which tools agencies are actually using after V1 launch.

19. Out of Scope (V1)

- Direct payroll platform integrations — CSV export handles this for V1
- Digitized agency-facility contracts
- Open marketplace / independent nurse sign-up
- Billing or invoicing between agencies and facilities
- Mobile native apps (iOS / Android)
- A fourth pay tier
- Non-compact state license lookups
- Flu shot tracking
- Custom credential builder with document uploads and approval workflows — deferred to V2
- Drag-and-drop internal schedule builder — deferred to V2

20. Onboarding & Help System

ShiftBridge users are not developers or tech professionals — they are nursing schedulers, agency coordinators, and per diem nurses. If anything is confusing they will go back to their spreadsheet. A strong onboarding and help system is essential to adoption and retention.

20.1 First Login Onboarding Flow

Each user type is walked through a guided setup the first time they log in. The flow is short, interactive, and skippable for users who do not need it. It covers only the actions most critical to getting started — not every feature.

- Agency Admin — guided through configuring pay tiers, adding their first staff member via NURSYS lookup, and creating their first placeholder facility
- Facility Admin — guided through shift configuration setup (defining shift times per credential type) and posting their first shift via the calendar button interface
- Nurse / Staff — shown how to browse available shifts, read a shift card including pay rate and drive time, and claim a shift

Progress is saved so if a user closes the app mid-onboarding they can resume where they left off. Completed onboarding steps are marked so users can revisit any step from a help menu.

20.2 Contextual Tooltips

Small help icons appear next to features that may need explanation — especially anything with platform-specific terminology or non-obvious behavior. Hovering or tapping reveals a short plain-language explanation. Examples:

- What is a tier? — explains Tier 1 / 2 / 3 and how bonus pay works
- Why can't I see this shift? — explains credential visibility and DNR filtering
- What happens when I mark someone DNR? — explains the effect and that the nurse is not notified
- What is a placeholder facility? — explains the concept and the address matching upgrade path
- What does this shift status mean? — explains Open, Claimed, Pending, Confirmed, Canceled

20.3 Help Center

A searchable in-app knowledge base organized by user type. Articles are short, use plain language, and include screenshots where helpful. Each user type sees articles relevant to their role first. Core article categories:

- Getting Started — account setup, profile completion, first steps for each role
- Shifts — posting, claiming, confirming, canceling, changing tiers
- Staff & Credentials — adding staff, NURSYS lookup, health credentials, license monitoring
- Agencies & Facilities — connecting, placeholder facilities, address matching, DNR
- Pay & Scheduling — pay tiers, base pay, CSV export, approximate hours
- Notifications — what triggers SMS vs in-app vs email, how to manage preferences
- Account & Settings — password reset, profile updates, pay tier configuration

20.4 Video Walkthroughs

Short screen recording walkthroughs for the more complex flows that are easier to show than describe in text. Priority videos for launch:

- How to configure your facility shift schedule and post shifts using the calendar
- How to add agency staff using the NURSYS license lookup
- How to set up a placeholder facility and enter shifts
- How to use the credential card when reviewing shift claims
- How to export confirmed shifts to CSV for payroll

20.5 Password Reset

Standard forgot password flow via email. Available from the login page without requiring the user to be logged in. All user types — agency admin, facility admin, nurse, and super admin — use the same email-based reset flow. Super admin can also reset any user's password directly from the admin dashboard.

20.6 Demo as a Training Tool

The demo environment (see Section 21) doubles as an internal training tool for existing customers. Agency admins and facility admins can use the demo to onboard new staff members to the platform without touching live shift data. New coordinators or nurses can practice the full workflow in a consequence-free sandbox before going live.

21. Demo System

An interactive demo environment accessible from the marketing or login page. Prospective customers experience the full shift workflow across all four dashboards without creating an account or touching live data.

21.1 How It Works

Launching the demo copies pre-built template profiles into a temporary sandbox session — a facility, an agency with pay tiers configured, and nurse accounts with different credential levels. All demo actions write to temporary records only. Everything is purged on session expiry or logout.

21.2 Demo Experience

- Post a shift as the facility admin
- Switch to the agency view — watch the shift appear
- Switch to the nurse view — claim the shift
- Switch back to the facility — review the credential card and confirm the nurse
- Observe notifications and status updates across all views in real time

21.3 Session Management

- Sessions expire after 60 minutes of inactivity
- All temporary records purged on expiry or logout
- No account creation required
- Each session tracked for analytics

22. Admin Analytics Dashboard

The Super Admin dashboard covers platform health, growth, demo performance, and facility acquisition activity.

22.1 Demo Analytics

- Total demo sessions over time
- Session completion funnel — shift posted, claimed, credential card viewed, confirmed
- Drop-off points in the demo flow
- Time spent in each dashboard view
- Demo-to-signup conversion rate

22.2 Placeholder Facility & Email Analytics

- Total placeholder facilities created
- Placeholder facilities with contact email on file
- Total shift confirmation emails sent
- Email open rate and confirmation link click-through rate
- Post-confirmation website visits
- Post-confirmation signups
- Pending address matches awaiting real facility signup

22.3 Platform Analytics

- Total active agencies and facilities
- Total confirmed shifts by week and month
- New account signups over time
- Agency-facility connection activity
- Cancellation rates and late cancellation frequency
- License and credential expiration alerts issued
- DNR flags issued — by facility and by staff member

22.4 Outreach Intelligence

Demo session timing and placeholder facility email activity can be cross-referenced with direct outreach efforts to measure effectiveness. Spikes in activity following outreach indicate interest is spreading even before formal signups occur.
